DETAILED ACTION

1. Claims 1-11 were examined.

Specification

2. The disclosure is objected to because of the following minor informalities:
element number (S3) appears missing from figure 9A; C01, C02 appear missing from figure 9B; C01 through C04 appear missing in figure 10; elements 1110 and 1130 appear missing from figure 11. Appropriate correction is required.

Non-Statutory Obviousness Double Patenting

3. Claims 1-3, 7,8 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3, 17,18 of U.S. Patent No. 6,892,366 in view of Bishop 6,671,661 .

Claims 1,2,3,17 and 18 of U.S. Patent 6,892,366 teach extracting electrical characteristics from an integrated circuit layout using Bayesian interface implemented method with a Monte Carlo method with electrical circuitry (i.e., capacitors, resistors, wire length and width); but doesn't state using a hybrid Monte Carlo method.

Claims 1-3, 17,18 of U.S. Patent No. 6,892,366 teach a method of constructing a model for estimating electrical characteristics for an extraction sub problem with training a machine-learning model with Bayesian interface implemented with a Hybrid Monte Carlo method, coupled with electrical circuitry (i.e., capacitors, resistors, wire length and width). However Bishop teaches a hybrid Monte Carlo (column 13, lines 50-61)

Art Unit: 2123

At the time of invention, it would have been obvious to one of ordinary skill in the art to modify claim 1 of U.S. Patent 6,892,366 by way of Bishop 6,671,661 since variations of Monte Carlo methods are applied well known within the art (Bishop: column 13, lines 50-62).

Claim Objection

4. Claims 2-10 are objected to as being dependent upon a rejected independent claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
